One Knowledge for Sustainability: small hydropower

- Small hydropower is currently known as the power generation method that has the least impact on the environment and ecology, and it is also a power generation method with low installation costs.
- It uses the existing waterways or water facilities to install hydroelectric power generation equipment, converting the potential energy or the kinetic energy of water to generating electricity.
- The locations that can be set are quite extensive, such as rivers, irrigation canals, sewers, flood detention ponds or sand dams, etc.
