Two new studies suggest Paris climate goal is dead. One scientist is going even further

CNN / February 10, 2025

Swaths of the US may be grappling with frigid weather, but for the planet as a whole, heat records are being obliterated — and it spells very bad news. Two new studies conclude it’s a signal the planet is likely on track to breach the Paris climate agreement goal of restricting global warming to 1.5 degrees Celsius...

Brazil Shares Priorities for COP 30

IISD / March 12, 2025

The President-designate of the 2025 UN Climate Change Conference (UNFCCC COP 30) has briefed Member States and Observers on Brazil’s priorities and preparations for the Conference. Elaborating on Brazil’s vision in a letter to parties, he further highlights it is “urgent we address, in a comprehensive and synergetic manner, the interlinked global crises of climate change and biodiversity loss in the broader context of achieving the SDGs.”

A Carbon-Reduced Future! OSE Promotes Autonomous Reduction Plans and Implements Carbon Reduction Measures

The Ministry of Environment announced the method for charging carbon fees and the management method for autonomous reduction plans in August 2024, aiming to encourage enterprises to voluntarily reduce greenhouse gas emissions. The autonomous reduction plan is formulated based on the "Climate Change Response Act," allowing enterprises to apply to the Ministry of Environment for approval of reduction quotas based on their actual carbon reduction plans. Currently, various industries are actively responding to this plan, receiving professional guidance, and setting specific goals and reduction methods...

ESG Info-PCR (Product Category Rules)

- Product Category Rules (PCR) within the scope of carbon footprint are a set of specific rules, requirements, and guidelines used when one or more products undergo third-party environmental declarations for carbon footprint quantification and communication.
- These rules ensure that assessments within the same product category are consistent and comparable, establishing industry standards. This allows similar products from different companies to be evaluated fairly and produce results that can be compared with those from other manufacturers.
- Due to the diversity of products on the market, with varying manufacturing methods, materials, and processes, PCRs can be applied for by manufacturers to the competent authorities. Once the review process is completed, they become the specific PCRs that can be followed by the industry.
- Currently, PCRs do not have global uniformity. Additionally, carbon labels and third-party verification statements cannot be universally applied across countries and should adhere to the regulations of the respective country. If relevant PCRs are available during the product carbon footprint inventory, they should be adopted.
